

Wizard2011

Function Overview

Information

Close

This is an overview for the functionalities of your tool. If you create a function description, it will be shown on the right side of the screen and you can select it in the dropdown menus in the center of the screen. A function is basically a use case for your tool (e.g. multiple sequence alignment for proteins). If your tool has multiple different application purposes you should create a function for each. If you want a described functionality to be part of the final tool description, just select it in at least one dropdown menu. Your tool description needs at least one selected function to be a valid tool description. You can create actual function descriptions using the "+" button on the right side of the screen.
