

Wizard2011

Overview

Information

[Close](#)

This is the general overview for the creation of your new tool description. You can easily see the current state of creation here. The traffic lights beside the categories represent how close your description is to completion. If the light is red, essential infos are missing and your tool description can not be converted to a valid xml file. This means that you will NOT be able to save your current state of work! If the light is yellow you have typed in all essential information to create a rudimentary but valid tool description-xml-file. If the light is green your description is fully completed and your work is done. To start a tool description you should start from the top to the bottom beginning with "Basic Information". If you want to load an existing (valid!) tool description, please use the "Load XML"-button. If you want to save your current state of work as an xml-tool description please use the "create XML"-button (this will not work if there are red traffic lights left!). If you want to delete your current work and start over again please use the "clear"-button.
