

Wizard2011

Description Editor

Information

Close

This editor enables you to create valid microhtml content according to the BiBiServ microhtml-schema. Some common html-constructs are not allowed in microhtml (e.g. tables and <h4>-tags). If you click "save" your content will automatically be transformed into valid microhtml. If your code contains invalid tags, the editor will try to convert them to microhtml tags (
-tags for example will be replaced by a <p>-tag structure). If this conversion is not possible, remaining invalid tags will be deleted.

This is a more thorough description of **testtool**.

testtool does alignment of two *DNA sequences*.
