

Wizard2011

Views	
<div><div>Information<div>Close</div></div><p>A view is an additional web page for your tools site on the BiBiServ. You have the choice between different types of additional pages that are contained in the BiBiServAbstraction schema. Please note that you can only create one view for each type. Each view has to have custom content to be valid. Defining views is optional and is not mandatory for a valid .bs2-description of your tool. It is, however, recommended. The content of your view has to be valid minihtml. To type in the content, just use the text editor. On the right side of the screen you have an overview of existing views. You can edit and delete existing views and add new ones. Please note that if you use the "edit" or the "+" button your current view is not saved!</p></div>	
Title:	<input type="text"/>
