

Wizard2011

Parameter Groups	
<div><div>Information</div><div><div>Close</div></div><p>A parameter group is a collection of parameters and other parameter groups. Its purpose is to group parameters into one reference to simplify parameter management. You can create actual parameter descriptions by clicking on the "+" button next to the label "parameters" on the right side of the screen. A parameter manipulates the behaviour of your functionality without being actual input data. If you want a finished parameter or a finished parameter group description to be wrapped in your current parameter group just select them in one of the dropdown menus and press "save". Also you have to type in a name to create a valid parameter group. The name of your parameter group has to be a unique id. The displayed name however may be the same as for any other parameter group. The displayed name is the name that is displayed to BiBiServ users. On the right side of the screen you have an overview of existing parameter groups. You can edit and delete existing parameter groups and add new ones. Please note that if you use the "edit" or the "+" button your current parameter group is not saved!</p></div>	
Name: *	<input type="text"/>
Displayed Name:	<input type="text"/>
Short Description:	<input type="text"/>
