

Wizard2011

Executable Information	
<div>Information Close</div> <p>Add information about the execution of your tool here. The executable type describes how your tool will be integrated on the BiBiServ (e.g. as a Java-class or a plain binary). The calling information is the "prefix" of any command line call of your tool without its path (e.g. in the call "myTool -e -f" this prefix would be "myTool"). You also have to type in the current version of your tool.</p> <p>Executable type: * <input type="text" value="binary"/></p> <p>Calling information: * <input type="text"/></p> <p>Version: * <input type="text"/></p> <p>Return Save and return Save</p>
